

## Monitor Stand Selection

Sound Anchors offers five stand designs in its range of performance monitor stands. We do this because monitor speakers come in many sizes, shapes and price ranges. Choosing which one is right for you will depend on the speakers, the rest of your system and your budget. All Sound Anchor Monitor Stands are custom made so each design can be configured for a wide range of monitors.

**Single Post Stands.** Sound Anchor Single Post Stands are our least expensive monitor stands. They are a good choice for when you want a performance stand for a high value or secondary system. The Sound Anchor Single Post Stands will support speakers with bases as large as 10" wide x 12" deep and can be made in heights up to 30". These stands are available with 3 or 4 spiked feet.

**Three Post Stands.** Sound Anchor Three Post Stands are our mid-priced monitor stands. They are a good choice for when you want more performance than you can get from a single post monitor stand but you can't justify the cost of four post stands or signature stands. Sound Anchor Three Post Stands are made for music lovers. They provide performance that will not disappoint. Three point stands are easier to level on uneven floors than 4 point stands. These stands can be custom made to fit almost any speaker.

**Four Post stands.** Sound Anchor 4 Post Stands have been the best monitor stands you could buy for many years. If you are setting up a statement type system with expensive speakers, electronics and cables you will want to hear every tiny detail. Sound Anchor 4 Post Stands are for the audiophile who enjoys listening to the details. These stands are heavy and have a large footprint making them very stable. Many decorators choose this stand for its balanced look. These stands can be custom made to fit almost any speaker.

**Signature Stands.** Sound Anchor Signature Stands are special versions of our 3 and 4 post stands that use upright tubes with a 2.25 x larger cross section than our standard 3 and 4 Post stands. They offer the highest level of performance and stability for those who demand it. These stands are custom designed for each application.

**Adjustable Stands.** Sound Anchor Adjustable Monitor Stands are rigid and heavy. They were designed for studio use and can be found in many of the world's most famous music, film and broadcast studios. From a performance, stability and price standpoint they fit right between our 3 and 4 post monitor stands. They are available in sizes to fit small and medium sized monitors. They are height and tilt adjustable from 6" to 56".
