Thank you for purchasing Sound Anchors stands for wall mounting applications. This Sound Anchors stand was designed specifically for monitor stands to be hung directly on the walls and out of the way of your floor space. It provides a universal swivel option so you can swing the speaker left or right to its desired location and tilt it down to get the proper listening angle. If you have any questions about the set-up process, the stands themselves, or any other aspect of Sound Anchors, feel free to contact us at 321-724-1237.

Assembly

The Assembly for the Wall mount stands is very simple. The only assembly required is to mount the platform onto the stand. Everything else has been pre-assembled from the factory. The Wall Mount platform uses 4 each $\frac{1}{4}$ -20 x $\frac{5}{8}$ Flat Head Cap Screws to mount into the mounting bracket on the main stand, as shown in the diagram below.

The wall bracket can be mounted to the wall before or after mounting the platform. Sound Anchors does not provide hardware to mount the stands to your wall. ***It is recommended that the stands are mounted to wall studs, or intentionally added secure structures in the wall.*** Often times, rooms are designed to include extra mounting studs for wall mounted applications. We rate our wall mount stands to hold no more than 100 lbs. and to fit speakers no larger than 20" wide x 17" deep.

Thank you again for your purchase of Sound Anchors wall mounts. We are confident they will be the perfect addition to your set up, and will last for years to come. If you have any questions, feel free to contact Sound Anchors Monday through Friday, 10:00 AM – 4:30 PM Eastern Standard Time.
